Digital Literacy Project Report

Name: Aryan Tak
Reg No: 25BAI10508
Branch: CSE (AI & ML)
Course Code: CSE0001
University: VIT Bhopal
Date: 27 March 2026

Introduction

This project was completed as part of the Digital Literacy course. As a Student Digital Ambassador, the goal of this assignment was to understand how to use digital tools effectively and responsibly. The project covers important areas such as digital awareness, building an online portfolio, using coding and collaboration platforms, professional email communication, and cybercrime awareness.

Through this project, I explored different platforms and tools that are useful for students. I also learned how to maintain a professional online presence and how to stay safe while using the internet. This project helped me gain practical knowledge that will be useful in academics and future career opportunities.

Task 1

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic included topics such as safe internet practices, professional online presence, and useful digital tools for students. I chose Canva because it is easy to use and provides many templates that help in designing visually appealing content.

The design focused on keeping the information simple and clear so that students can easily understand it. I used icons, short points, and proper color combinations to make the infographic attractive.

One challenge I faced was selecting the right content and arranging it in a limited space without making it look crowded. However, this also helped me improve my design and content selection skills. Overall, this task helped me understand how to present information visually in an effective way.

Task 2

In this task, I created my digital portfolio using platforms like GitHub and LinkedIn. GitHub is mainly used to showcase coding projects and technical work, while LinkedIn is used for professional networking and career opportunities.

On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I added my education details and started building my profile.

These platforms are important because recruiters and internship coordinators often check them. Over the next four years, I plan to regularly update my GitHub with projects and improve my LinkedIn profile by adding skills, certifications, and experiences.

This task helped me understand the importance of having a professional online presence and how it can impact future opportunities.

Task 3

For Task 3, I explored coding and collaboration platforms. I used HackerRank to solve a beginner-level problem, which helped me understand basic problem-solving and coding practice.

I also created a Google Form as a Digital Literacy Awareness Quiz. The form included five questions, including multiple-choice and short-answer types. I linked the form to Google Sheets to view responses.

These tools are very useful for students. Coding platforms help improve programming skills, while Google Forms can be used for surveys, quizzes, and data collection.

This task helped me understand how digital tools can be used for both learning and collaboration in academics.

Task 4

One common issue in digital communication is sending informal or unclear emails to professors. For example, students sometimes send messages without a subject line or proper greeting, which looks unprofessional.

This can create a negative impression and may lead to miscommunication. To avoid this, emails should always have a clear subject, proper greeting, and respectful tone.

Through this task, I learned how to write professional emails and the importance of maintaining proper communication etiquette.

Task 5

While researching cyberbullying, I was surprised to see how common and harmful it is, especially among students. Many people do not realize that online actions can have serious emotional effects on others.

One important habit I will change is being more careful about what I post or share online. I will also avoid engaging in negative discussions and report harmful content when necessary.

This task helped me understand the importance of online safety and responsible behaviour on digital platforms.

Conclusion

Overall, this project was a valuable learning experience. It helped me understand different aspects of digital literacy, including online safety, communication, and professional presence.

I learned how to use various platforms and tools that will be useful in my academic and professional life. This project also made me more aware of cyber risks and how to avoid them.

In the future, I will continue to improve my digital skills and use them responsibly.
